Printed in Canada

Designed by award winning home products designer Myles Keller, the Kitchen Collector's smooth soft lines and contemporary styling have made it the #1 selling Collector in North America and a welcome addition to any kitchen. The oval shape and rounded corners facilitate easy plate-scraping and thorough cleaning. The easy-mount system allows a choice of mounting on the cupboard door, storing under the counter or placing on the counter top.

Ideally sized to promote emptying 2 to 3 times per week, the Collector works perfectly with EcoSafe®~6400 Compostable liners that keep everything clean, eliminate the "yuk" factor and make emptying a snap. Just tie off the bag, pull it from the container and carry it to your curb-side green bin. No leaks, no spills, no odors!

The snap-latch, 360 degree double-rim closure lid eliminates the need for venting and use of expensive filters. This secure closure keeps bugs out and odors in. The low, stable profile helps prevent accidental spills and allows for easy rinsing under the kitchen faucet. And, for that occasional thorough cleaning, it is tested to withstand 20 continuous dishwasher cycles.

The EcoSafe® Kitchen Collector is made in Canada with HDPE resins, including some recycled material (percentage will vary based on availability).
